

Corn

EFEZIA

Semi-early corn

- **Very good silage yield potential**
- **Rustic, very good health profile**
- **Excellent digestibility and feeding value**

IDENTITY

- Genetic	3-Way cross
- Type	Flint to soft flint
- Market	Silage
- Earliness	Semi-early (end of C1 group)
- Registration	2016, European Union

AGRONOMIC PROFILE

- Early vigor	Very good
- Morphology	Excellent vegetative development
- Plant height	Rather high
- Ear insertion	Low
- Leaf attitude	Semi-erected to erected
- Flowering earliness	Semi early to semi late
- Lodging	Excellent tolerance
- Diseases profile	Very good overall health behaviour
- Temperatures	Silage (30% Dry Matter) 1.510°C
	Grain (35% Humidity) 1.750°C

TECHNOLOGIC PROFILE

- Feeding value	Very good
- Digestibility	Very good

CROPPING ADVICE

Plant between 95.000 and 105.000 seeds / Ha
